

THE HASANAT HIGH SCHOOL BUZZ

SEPTEMBER

PRIMARY PALS!

EDITION 1

MYSTERIES OF HISTORY

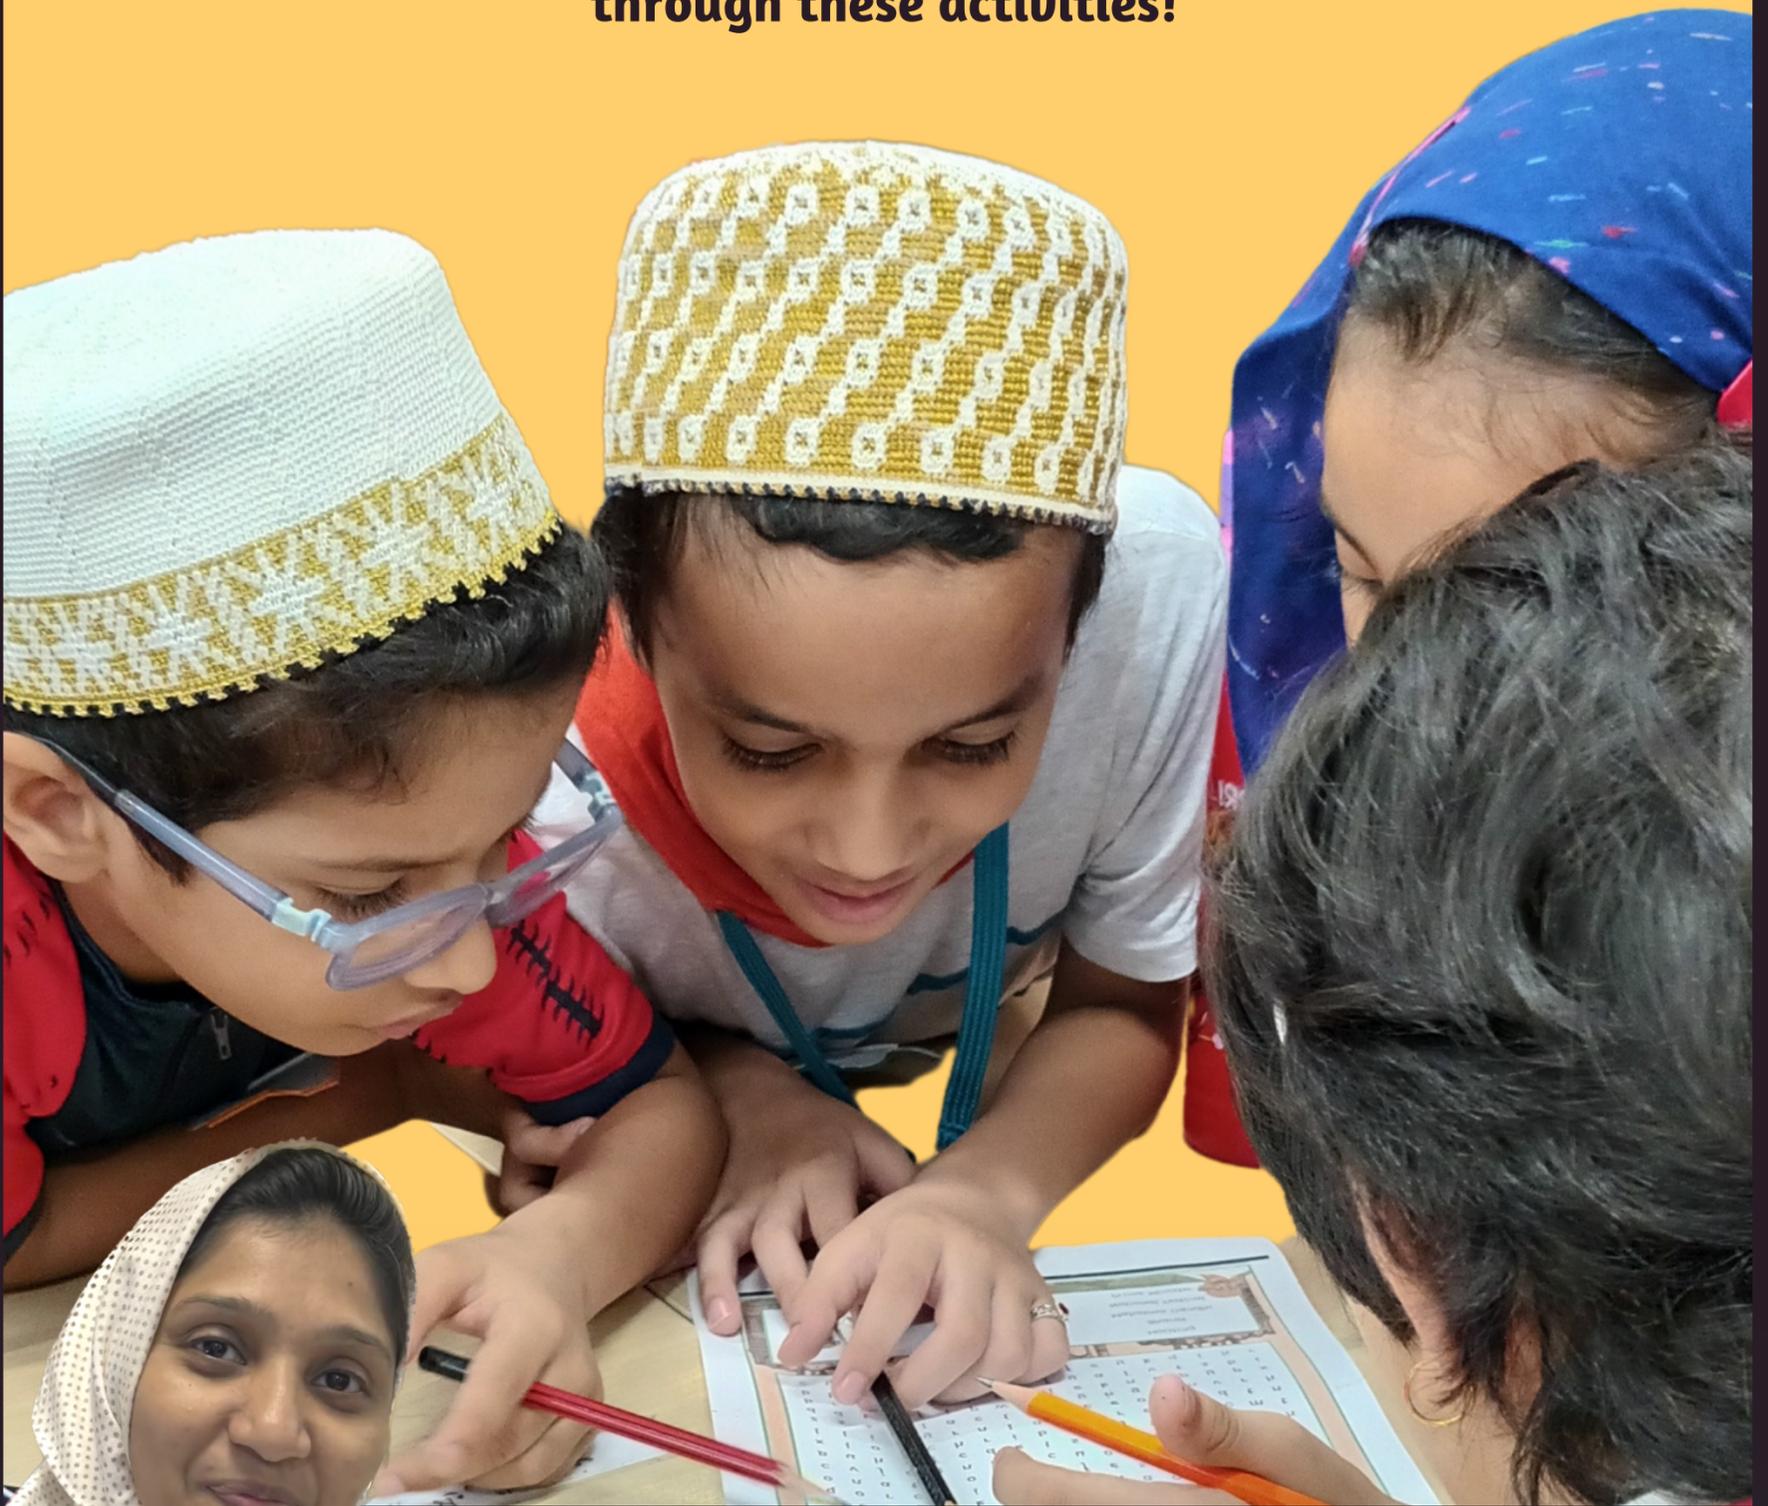

India celebrated 75th Independence Day on the 15th of August 2022, as this is the historic day when India got independence from the British rule. On this day, we remember all our freedom fighters who sacrificed everything for the country. Like every year, on this independence day, our school held a flag hoisting ceremony and celebrated this day throughout the week by doing different activities.

The pre-primary grades did activities related to this day like greeting in different languages, reciting Hindi poems on patriotism, dressing in tricolor clothes and having lip smacking tri color snacks.

The primary grades did activities like arranging the states of India by the jigsaw puzzle, coloring pictures of lotuses and peacocks in the given time frame, solving crosswords on independence day vocabulary, quiz on Navy, Army, and Airforce, and map marking the states and their capitals.

The middle school and the secondary grades had a house-wise quiz competition. The questions were formed around the unique facts of India, symbols of India, council ministers, etc.

We witnessed students having a lot of fun through these activities!

Let's Keep in Touch

WHO'S THE WINNER?!

STUDENT'S WORK

Our school has an activity called DEAR week. In it, we have to Drop Everything And just read for fifteen (15) minutes. I love this activity because I am fond of reading and our school is the only place where all the teachers, students, staff, helpers, including our principal sir - drop everything aside and they read. One more activity I would like to share is regarding physical Education (P.E). In P.E. we do Martial Arts. I like this activity because it makes us flexible and keeps us fit and strong. Thank you

Poetry out loud

Date: / / No.

In this event we had to sing a poetry and I took Lying Larry. I tried my best, but my friend Rukaiya Bohra won first place so I was happy for her.

I liked poetry out loud because I make really deep poems like ^{these} clouds are everywhere and so are people, clouds are soft, so people's hearts. ~~and~~ There is one more reason I like poems because they are just short ^{stories} story with rhyming words and I love stories, stories

Phenomenon Based Learning:

In PHBL our teachers family members came to school and we asked about our teachers to their family members. We had lots of fun to asks and to find what my teachers do and eat. I had fun because that day school gave snacks and it was to yummy.

SAKINA KANCHWALA
GRADE 2

HELLO!

How are you feeling today? Hmm, good, nice, okay...well that's what we hear right from our little ones. We'll I won't be surprised if you and I answer the same too. Have you ever wondered why???

Yes you got it right, it's because we haven't taught our children to be more specific about themselves and their feelings.

It's shown that when people don't acknowledge and address their emotions, they display a lowered sense of well-being and more physical symptoms of stress, like headaches. There is a high cost to avoiding our feelings. On the flip side, having the right vocabulary allows us to see the real issue at hand-to take a messy experience, understand it more clearly, and build a roadmap to address the problem.

We at Hasanat have started a small initiative in the Primary grades of helping our students understand their emotions, which in return will help them to be better learners. To begin with, our Morning Meeting ritual, is one of the spaces where our students can express themselves and the teacher comforts our little ones to be ready for the day's learning.

I am sure even our grade 1 parents have witnessed this during the showcase of their PhBL. Even our grade 2 topic is all about family tree and relationships. I am sure you will agree that the children's emotions and feelings changed when they got to know about your past during PhBL that helped them understand their present better.

Last but not the least, apart from this, there are many other activities that take care of our student's well being in school and make them happy learners.

As you all know a picture paints a thousand words.

Here's a glimpse of how these little ones not only have fun during their academic classes but also in all the informal spaces.

their achievements

A LITTLE NOTE!

"Isn't learning such a funny thing? On one hand, it is neurons firing and making stronger synapses, while on the other hand, it is a lightbulb moment when we acquire new knowledge or skill. The truth, of course, is that it is both! A state of growth for the individual engaged in it.

I believe that learning isn't only for the young ones. Teachers need to be practising researchers. We need to be linking our practice to inquiry and reflection consistently. Parents need to be learners to keep up with children and their pace. Can we all promise ourselves to be learners?

Everything else, we will figure out!"
